Technical Skills

Programming languages: Python, SQL, R, C++, DAX
Databases: PostgreSQL, Oracle SQL, MongoDB
Data Platforms: SAP, Snowflake, dbt, Databricks, Airflow
Reporting: Power BI, Tableau, Power Query, Looker, Excel
Automation: Alteryx, Power Automate, Selenium
Developer Tools: Git, Jira, Confluence, Visio

Professional Experience

Business Analyst Intern June 2026 - Sept 2026
AdvaGen Pharma Princeton, USA

- Saved 1 hour daily by designing the organization's first automated, SQL-driven SAP sales pipeline and live Power BI Daily Sales dashboard, streamlining executive sales-tracking workflows.
- Built a Power BI demand forecasting dashboard comparing forecasted demand against actual sales at the customer-product level, enabling sales leadership to identify shortfalls and take targeted inventory corrective action using Python and DAX.
- Prevented $50K in overstock and stock-out losses, optimizing daily warehouse capacity, by building a Python report generator that prioritized picking lists using deadlines, order priority, location, and cancellations.
- Ensured deployed projects met stakeholder needs by participating in daily Agile sprints, testing dashboards, gathering feedback, and translating stakeholder insights into process improvements across sales, finance, and ops.

SAP Data Analyst Intern Jun 2024 - Aug 2024
Time Technoplast Mumbai, India

- Optimized product mix decisions, increasing plant sales by 12% the following month, by integrating, validating, and analyzing SAP production and sales data to surface operational inefficiencies.

Education

University of Maryland, MD, USA Expected December 2026
Master Of Science, Information Systems & AI 3.92/4.0

Sardar Patel Institute Of Technology, Mumbai, India June 2025
Bachelor of Technology in Computer Engineering 8.06/10.0

Academic Projects

Technical Consultatation Intern Jan 2026 - May 2026
Maryland Department of General Services (Capstone)

- Unified fragmented order-intake workflows across Maryland DGS, consolidating Baltimore-wide operations into a proposed mobile application by translating cross-departmental stakeholder requirements into scalable logical and physical data models, including ERDs, DFDs, and database schemas.
- Secured executive approval from the CIO and Deputy Secretary for a Fall technical launch by presenting detailed API integration strategies and full solution architecture recommendations.

Demand Forecasting & Revenue Analytics May 2026 - Jun 2026
Advanced Project

- Designed a PostgreSQL revenue analytics database by ingesting 50K+ E-commerce records across nine relational tables using Python, then engineered category-level daily revenue datasets through SQL transformations.
- Conducted time-series analysis using ARIMA, Prophet, and XGBoost with rolling-window validation, comparing forecast accuracy across models and generating a 60-day revenue forecast for demand planning.
- Developed an interactive Tableau dashboard to communicate category performance, historical demand trends, forecasted revenue, and model results, translating complex analytical findings into actionable stakeholder insights.

Financial Market Regime Analysis Jun 2026
Databricks Project

- Architected a production-style Databricks pipeline using Delta Lake tables and PySpark, orchestrating Bronze-Silver-Gold Medallion Architecture as a scheduled, dependency-based Databricks Workflow instead of siloed, standalone notebooks.
- Engineered 15+ macroeconomic and sector features into versioned Delta tables within Databricks' Gold layer, enabling reliable four-regime classification of historical U.S. economic conditions across time.
- Built a regime classification system tagging historical data into inflation, GDP, Fed policy, and yield-curve categories, then generated automated visualizations comparing performance across all six sectors.

Achievements

Winner, EY Financial Analyst & IBM Case Competitions

- Won 1st place in case competitions hosted by EY and IBM by developing and presenting data-driven solutions to complex business challenges

Teaching Assistant, Information Systems, AI, and Digital Transformation

- Selected to support and mentor students in Information Systems, AI, and Digital Transformation course, guiding them through course concepts and applied learning
